

Louisville Regional Airport Authority Sustainability Policy Statement

The Louisville Regional Airport Authority (LRAA) is committed to upholding environmental stewardship in the operation and development of Louisville Muhammad Ali International Airport (SDF) and Bowman Field (LOU). LRAA has a long-standing commitment to reducing environmental impacts associated with airport operations and is working diligently to reduce our carbon footprint through a holistic approach that considers social, environmental, economic, and operational impacts.

Our sustainability vision is:

“To be an economically viable world port and airport system that supports innovation and customer service, while transporting people and goods in a socially and environmentally responsible manner.”

In carrying out this vision, we aspire to simultaneously strengthen our economy and community, sustain our operations, and protect our environment. This will be accomplished by investing in our people, enhancing the customer experience, designing sustainable facilities, and maintaining our competitive cost structure to maximize the airport’s world economic benefit.

As we continue to develop a framework for our sustainability program and implement best practices related to energy efficiency and emissions reductions, this policy statement serves as a key element of our program while also meeting the requirements of the Airports Council International’s Airport Carbon Accreditation program.

Dan Mann
Executive Director
Louisville Regional Airport Authority
